Virtual Engineering Bench

Access to the Skill Sets you Require

When companies are tasked with managing and advancing their organizational IT to support their business they must consider a wide range of technologies and the necessary team members that will support it. One of the biggest challenges of IT staffing is deciding what technologies you will count on from your partners to support. Hiring a resource for each of the areas that you need to support, or building your own team for new projects, can be an expensive daunting task.

MPY Technologies offers a service that will allow you to augment your team with a wider range of skill sets for a much lower cost. Imagine hiring one full-time employee (FTE) for your bench and that one person having the ability to change from an expert in Microsoft SharePoint to an expert in Cisco Router and Switching technology. Now imagine that this person has access to manufacture top level support at no cost to you.

The Answer is MPY Technologies

For the cost of a single FTE MPY Technologies can offer you an extensive list of skill sets in a structure that MPY Technologies calls the Virtual Engineering Bench. With our extensive skill sets, across our entire engineering team, we can provide you with access to a deep and varied set of skills across many different technologies whether you need 1 hour or 1 month of assistance.

Partner for Success

As we have proven for the past 5+ years, MPY Technologies is a trusted partner that can enable your IT strategy both long-term managed services engagements, as well as for your near-term project needs. We have a robust service offering supporting the middle market from basic requirements to more complex IT environments. With exceptional skills, innovative technologies and superior process expertise, your business performance will be dramatically enhanced without significant up-front capital expenditures or risky transitions.
